

Customer Instructions "Ninja" CARPET EXTRACTOR

Operating Instructions

1. Plug the machine's power cord into a properly grounded outlet. Turn each of the pump & vacuum switches on and off to check the connections.
2. Connect the large vacuum hose to the machine (the connection point is on the front) and slide the swivel cuff over the outlet on the tank.
3. Connect the narrow water hose to the machine at the front opening. Pull back the collar on the disconnect coupler and push the hose onto the connection on the machine. Check that a positive connection is made to avoid leaks. Connect the other end of this hose to the wand.
4. Use a clean container to fill the solution tank with clean, hot water. Do not use water over 130°F. Mix in a non-foaming cleaning concentrate for use in hot water extraction machines, by following the directions on the container. NOTE: A to Z sells Marvel, which is specifically made for carpet cleaning. If using a powdered cleaning product, pre-mix with hot water in a clean container before adding it to the solution tank. If using another cleaning product, please refer to the important warnings below.
5. Turn the pump & vacuum switches to the "on" position.
6. Normally, cleaning solution is applied on the "push" stroke of the wand, with the spray valve depressed at that time. Vacuuming is done on the "pull" stroke, with the spray off. For heavily soiled carpets, the wand may be used in a scrubbing manner, applying cleaning solution on both the push and pull stroke.
7. When cleaning, keep the wand mouth flat on the surface being cleaned. Keep the wand moving at all times when the spray valve is open.
8. There is a shutoff inside the vacuum tank that will stop the vacuuming action when the tank is full. If the vacuum seems to have stopped working, stop the machine & empty the dirty water from the vacuum tank, by opening the valve on the front of the tank. Once the tank has been emptied, you can continue to clean.
9. When you are done, please be sure to rinse out the recovery tank with clean water before you return the machine. This may save you cleaning charges.

SUITABLE CHEMICALS

- Alkalis
- Detergents
- Hydroxides
- Soaps
- Vinegar

NON-COMPATIBLE CHEMICALS

- Aldehydes
- Carbon Tetrachloride
- Lysol
- Aromatics Hydrocarbons
- Clorox
- Methyl Ethyl Ketone
- SP Butyls
- Chlorinated Bleaches
- Perchlorethylene
- Phenolics
- Trichlorethylene
- D-Limonene
